APPROVAL STATEMENT

This Annual Action Plan 2024 of the Kwahu West Municipal Assembly is an abstract from the Municipal Medium-Term Development Plan 2022-2025 under the Medium-Term National Development Policy Framework 2022-2025.

The Annual Action Plan 2024 was approved by the General Assembly on 31st October, 2023.

The annual development projects and activities as contained in this action plan reflect the aspirations of the majority of the people which when implemented, will improve the socio-economic conditions of the people within the Municipality.

HON. MUN. CHIEF EXECUTIVE
KWAHU WEST MUNICIPAL ASS.
NKAWKAW

HON. YAW OWUSU ADDO
(MUNICIPAL CHIEF EXECUTIVE)

MUNICIPAL CO ORDINATING DIRECTOR
KWAHU WEST MUNICIPAL
ASSEMBLY
NKAWKAW — E/R.

PETER KWABLA TETTEH
(MUNICIPAL CO-ORD. DIRECTOR)

1. Introduction

This Action Plan is based on the planned activities for 2024 in the Medium-Term Development Plan (MTDP) 2022-2025 of the Kwahu West Municipal Assembly. Thus, it is an extract of the MTDP 2022-2025.

The Assembly has planned to undertake Sixty-two (62) programmes and projects for the year, 2024.

Table 1.1 breaks down the activities into the various development dimensions of the MTDP.

2. Physical Characteristics

This section provides summary physical characteristics of the Municipality. This will give some physical context to the items in the activities in the Annual Action plan for the year.

2.1. Location and Size

The Kwahu West Municipality is located in the Eastern Region of Ghana and it is one of the thirty-three (33) Districts/Municipalities in the Region. It lies between latitudes 6º30' North and 7º North and longitudes 0º30' West and 1º West. The Municipality is bordered to the East by Atiwa East District, to the North by Kwahu South Municipal, to the South by Birim North District and to the West by Asante Akim South District. The Municipality has a total land size of 401km^2 with 214 communities. It lies about 241kms north of Accra, the Capital of Ghana.

2.2. Climate

The Municipality lies within the wet-semi equatorial region and as such, it experiences a double maxima rainfall pattern with average monthly relative humidity ranging between 75 percent and 80 percent during the two rainy seasons. Mean monthly temperature is 30^{o}C which is often recorded between the months of March and April but decline to 26^{o}C in August.

The Municipality comes under the influence of two air masses, namely the Tropical Maritime Air Mass (MT) and the Tropical Continental (CT)Air mass. The Tropical Maritime Air Mass hits the Municipality twice a year thereby causing the two rainy seasons. The two occasions are May to August and September to October. Between the months of November and March, the Municipality is affected by the tropical continental air mass making the area warm and dry.

The climate in the Municipality supports all year-round agriculture and the production of tropical crops such as cocoa, timber, cola and cereals. The current global climate change is however having a gradual impact on the environment which is a threat to food security and livelihood of the people in the Municipality.

2.3. Vegetation and Forest Reserves

The Kwahu West Municipality lies within the semi-deciduous forest zone, which belongs to the Antiaris-Chlorphora association. The vegetation is dense and consists of major economic trees such as Odum, Wawa and Sapele. These economic trees are sources of employment for most people in the wood and timber industry. The forest is made up of three layers with most of the trees in the upper and middle layers exhibiting deciduous characteristics during the dry season, which starts in November and ends in March. Few of the virgin forests in the Municipality remain due to the negative effects of human activities such as timber extraction, farming and bush burning. Most forest areas have been reduced to secondary bush or forest, which is easily distinguished from the climatic vegetation.

There are three forest reserves in the Municipality; the Southern Scarp, which covers an area of 15,460 hectares which is the largest, the Kade-Bepo, and the Nkawanda Forest Reserves. These forest reserves which were created during the colonial era have since come under threat by encroachers.

3. Local Economic Development

The Municipality has several potentials for economic development that can be harnessed to facilitate the realisation of the development goals in the plan. Aside the physical potentials of the location of the Municipality, some of these are also relevant for the development and achievement of the objectives of the plan. Two main issues highlighted in this section of the plan are the entrepreneurial opportunities and the tourism potentials of the Municipality.

3.1. Entrepreneurial Potentials/Opportunities and Challenges

The entrepreneurial opportunities in the Municipality include the use of clay for the manufacture of valuable goods, and expansion of ginger and tiger nut cultivation to serve as ready raw materials for value addition and processing factories. This is expected to create jobs and ultimately boost the local economy.

These opportunities are confronted with challenges of financial support and inadequate technological and technical know-how, lack of entrepreneurial skills and high interest rates from financial institutions. The Municipal Business Advisory Centre is well placed to provide entrepreneurial and facilitation advice to prospective investors.

3.2. Tourism Development

The Municipality is endowed with unique natural tourist sites which have the potential of rivalling some of the well-known tourist attractions in the country. These include; three Forest Reserves (Southern Scarp, Kade Bebo and Nkawanda, Waterfalls and Ancient Artifacts at Asuboni No.3, Caves at Nkawkaw-Kuma, Pottery Works at Oframase, and Kwahu Scarp and Paragliding Landing Site at Nkawkaw-Atta Ne Atta. However, these tourist sites and potentials are underdeveloped and require the needed public and private sector investment to develop them into standard attractions for the socioeconomic enhancement of the Municipality.

4. Demographic Characteristics

The activities in the plan are formatted, discussed and being envisaged that their implementation would be for the benefit of the inhabitants of the Municipality. The demographic characteristics of the people will determine the extent to which the plan will benefit them. Moreover, the appreciation of the demographics will enhance areas that their contributions to the realization of the objectives of the pan will also be discovered.

4.1. Population Size and Growth Rate

According to the 2010 Population and Housing Census (2010 PHC), Kwahu West Municipality had a total population of 93,584 with an annual growth rate of almost three percent (2.7%), higher than Eastern Region's growth rate of two percent (2.1%) and the national growth rate of 2.5 percent then. The main reason accounting for this situation is immigration. The 2021 population for the Municipality was projected as 120,525 based on the 2010 PHC., however the actual numbers exceeded the projected figure to 145,429. This is over 50% increase over the ten-year period. The Municipality remains the second most populous area within the Eastern Region, constituting 5.1% of the total population.

This calls for proactive physical and infrastructure planning to ensure that the growth does not precede planning. It is also important to study the growth trends and areas as well as the driving factors so as to inform effective policy interventions.

4.2. Age and Sex Distribution

According to the 2021 Population and Housing Census (2010 PHC), the sex ratio of the Municipality is 94.2 for males to 100 females. This is higher than the ratio recorded in 2010, which is 92.1 for males to 100 females. Based on the 2021 PHC, the Municipality has a population of 82,527 (56.7%) of persons aged between 15-64 years. This is lower that the regions sixty-one percent. The proportion of the population aged 0-14 constitutes 55,046 (37.9%) whiles that of 65 years and above is 7,856 (5.4%).

The above figures imply that there are about 76 dependent persons (children 0-14 years and 65+) for every 100 in the working age group (15 - 64 years). That makes the dependent population about 62,902. This ratio is higher than the regions 65 dependent persons for every 100 in the working age group and 68.05 for the national age dependency ratio.

The implication is that though the population is youthful, there are many more in the depended group that policies should cater for.

The higher dependency ration also highlights the need to empower the working group for their capacity to support the dependent group. High unemployment rates can affect their capacity to support the dependent group.

The structure highlights the type of interventions for job creation, youth development and even security to harness the full potential of the youthful population of the Municipality.

The figure 1.1 is the combined age-group population pyramid that depicts the structure of the Municipality.
